

Upgrading Future...

5th April, 2022

TO WHOMSOEVER IT MAY CONCERN

This is to certify that we have translated Hindi Video to English which came to 14 pages script pertaining to Knowledge and Skill International, South Africa, based on the documents provided by him to the best of our knowledge and ability. Video was done from Hindi to English.

We are certified translators under the shop & establishment Act bearing Regn.No.HaKaa.Ni. – 47/45/ Va.Sam – 006/ 2011

Thanking You,

Yours faithfully

For Sai Vigyan,

Yamuna Prabhakar

Proprietor

Respected Dr. K.S.Gopinath, Respected Dr. Sridhar Saraswati, Respected Dr. Abhilasha Gaur, Respected Dr. Prabhakar G.N., Respected Dr. Shivkumar Gumbar, Respected Dr. Patel Khandwa present on the stage in the international conference on New Era of Skill Development and Integrated Approach to Medical Science and Technology in Health Care Industry. Through virtual medium present in this meeting Dr. Tate Makgoe Honourable Minister of Education Free State Government of South Africa, Miss Montseng TSIU honorable Minister for Health Free State Government of South Africa, Miss Lizzie Fikelphi Shabalala, honorable minister of parliament South Africa, present in the hall as well as present in this program through virtual medium national and state award recipient eminent doctor from India and South Africa, leading scientists and technology experts, Anthony Selorum, honorable Chairman Sector Skill Counseling Government of Ghana, Chief Scientist, and Technology Experts, Academics and Industry Partners, Senior Journalists, Ladies and Gentlemen, I salute you all. I warmly welcome you all. Organized by Electronics Sector Skill Council of India and Indian Medical Association Karnataka State and Arcyon International Institute of Medical Science and Technology Council, a new era of skill development in the healthcare industry and an integrated approach to medical science and technology once again I warmly welcome the representatives of India and South Africa to the international

conference. New topics come up and getting information about those topics, understanding them, and moving forward on them in terms of skill development, I would like to state that ancient India has been playing a leading role in the development of medical science. Maharishi Charak is known as the father of Ayurveda and Medical Sciences in India whereas Maharishi Sushruta is known as the father of Surgery. The system of medicine in India had gained prominence long ago in terms of skill, even today the fame of India is moving in this direction. I am happy that today in this convention the representatives of South Africa and their government representatives are participating. Around 19 to 20 years back I had got an opportunity to travel to South Africa. The four main cities which are there, I got an opportunity to visit them.

Even in rural areas, there was an opportunity to study in agricultural fields and in various fields, even at that time there was good dominance of Indian people and even today it's there and as people's representatives, Indians have played an important role in South Africa. In the present modern era the primary medical system is considered to be allopathic medicine, apart from this many methods are prevalent which have been termed as alternative medicine and they are also used according to the need. Today India's self-reliance in the field of

medicine has advanced, we have good technology, good disease specialists, good medical facilities are available, we all know that in our country, AIIMS is in Delhi, and on that same logic, AIIMS has been established by the government to provide excellent medical facilities in many states. In the country, All India Medical Sciences Institute Delhi's honorable Prime Minister's wish is that every state of the country should have at least one such institute and arrangements are being made to establish it, We have seen that from last 5 to 7 years whether it is from an education perspective, from a health perspective, from an engineering perspective or in any other field the need for development in the engineering sector is progressing at a fast pace. It is a matter of pleasure that under the leadership of the Hon'ble Prime Minister, our country is advancing step by step with the world in terms of medical education, skill development, and research. The efforts are still in progress. In this changing era of technology, medical science needs biomedical, electronics, artificial intelligence, and machine learning, and keeping this in mind, the government is making speedy efforts at every level. Integration of technology and medical science is a big challenge as the lack of qualified and educated human resources is a big problem. The one who does the business, the skill is very important in that business and the skill gets him success in his business, so having skill is very important for those working in every field, we should try in this

direction. But I am happy to say that today we are moving ahead in such kind of by making a thoughtful action plan. IIMSTC is a council of scientists, technologists, educationists and medical practitioners, and qualified persons who are involved in technology and medicine. It's yours, It is working tirelessly towards bridging the gap between science and I think with your efforts, special attention is given to every field, and especially in these fields skills are acquired. On this occasion, I appreciate Doctor Shridhar Saraswati Ji, the famous neuroscientist who is doing research in the field of technology and medical science with a team of experts for the last many years. The research work has been named Parametronics. I am also happy to announce that in this work the Electronics Sector Skill Council of India and Indian Medical Association have also supported the efforts of Dr. Saraswati and her team. You all are also to be congratulated on this. I praise your efforts, I also appreciate them. This is a good thing that through you, through your institution the said concepts and knowledge is being shared with African countries. Your efforts are being successful in terms of skill development in both countries. I hope that this collaboration, training, and research, technical skill education, industry, jobs fields will be beneficial for both countries, and the benefits will be enjoyed by the citizens of both the countries

I am also happy to know that many multispecialty hospitals of the country are associated with this collaboration through which we African citizens who want to get their treatment in India, their treatment is done with affordable and accessible arrangement with qualified and experienced doctors. The collaboration will surely guide the next generation in India and South Africa as well as across the world and the country will make a special identity in the world. I would like to say one more thing. Many students of India go abroad to get different types of education, especially for medical education, in large numbers, the war between Ukraine and Russia also shows that our people who are there and especially the students are being brought back to India in their numbers, they are going there to get education in the field of medicine, That way the government has also made a plan to do all-round development in the medical field through the state governments and the central government in these 7 years especially. Many medical colleges have been established, have also worked to increase the seats for the medical college, but it is felt that even today, whether it is the field of engineering, whether it is the field of medicine, there is a need to establish a large number of institutes and there is a need to increase the number of seats. I think the Prime Minister of India, the Government of India, and the Government of Karnataka will take active initiatives in this direction and do development work in this area. I offer my

good wishes to the Electronic Sector Skill Council of India, Indian Medical Association, and Arcyon Medical Science and Technology Council's international institution for the work being done by them in the field of technology and medical science. I express my gratitude to African ministers, peoples' representatives and governing officials, all the expert dignitaries participating online and offline in this ceremony and I also believe that the more we are in touch with people, and if there is an opportunity to hear and discuss something, then the knowledge increases. I used to work for the Birla industry before joining politics, was a good worker on the mechanical side, I also got a chance to work with engineers from Germany and Japan, they had come to fit some machines, I told them that we can do this too. They said the guarantee is up to 3 years, it will last for three and a half years if we are going to fit, but if your people fit then we have to open it in 6 months, I said how come, they said, your engineer sits in the air condition office, instead of showing loyalty to his work, sends the fitter to fit it, the fitter comes with a helper and sits on a stool and asks him to join it, so the smoothness that should come, does not come and its bad effects are that its durability is affected and its functioning is affected. Because of this, there would be errors in manufacturing. There is a need to work with a spirit of patriotism at your end, this is how we think. Truly I got to learn a lot, this is just a small example. Skill, in a definite form in

whichever field you work, I will like to repeat once again allows you to climb the ladders of success and make you successful. Many times we see such examples that a lot of businessmen after getting established or many medical institutes after getting established progress day by day and many cannot progress, due to this we get an opportunity to understand the difference. Now Karnataka's famous medical institute, Manipal and IIMSTC The work you do in this you may get help and its benefit will be reaped by everyone. Many many thanks to all of you for showing an interest in the opportunities provided by our country and I believe that the Indian Government's famous honorable Prime minister's dream for a self-reliant India will be successful due to efforts with the medium of institutions like yours.

Thanks

Jai Hind
